

HANDI-RING®

PRODUCT DATA SHEET

MODELS

- 10-9090
- 10-9090-SP4204 (w/ Padlock Clip)

Large sealing slots at either end of the screw provide quick installation and more sealing possibilities than other screw type rings.

The Brooks Handi-Ring® is engineered for strength, long life, and easy installation. Designed with the meter person in mind, this sealing ring is equipped with exclusive easy-grip tabs and a finger-grip screw that allows hand-tightening in most installations.

HANDI-RING® FEATURES

- Heavy duty, stainless steel band is manufactured under high quality control to maintain a rigid, round diameter with no edge wrinkles.
- The front wall of the band is smaller than the back wall, per ANSI standards, so pressure will not be placed on the glass cover when tightened.
- The finger-grip 5/16" screw with Acme threads allows for hand-tightening in most installations, but also accepts a slotted screwdriver or 3/16" hex drive and can be reversed for left-handed installers.
- The bracket and finger-grip screw are made of corrosion resistant, die-cast zinc.
